PRESSURE REGULATORS

Type RP/10

RP/10 Regulators

Type RP/10 Pressure Loaded Regulators

RP/10 regulators are pneumatic-loaded and feature counterbalanced valve.

The RP/10 regulators are normally employed in pressure reducing stations using high pressure gas compressed in cylinders.

They can also be employed with middle pressure gas in ceramic, chemical, and pharmaceutical factories for small furnaces.

The main features are as follows:

- Counterbalanced Shutter
- Built-in Relief Valves

Operation

The stem S is controlled by the diaphragm unit M on the opposite surfaces of which are balanced in one side the downstream pressure and on the other side the setting static pressure.

The causes that can intervene to modify this state of balance are:

- 1. increase of the request of gas
- 2. reduction of the request of gas
- 3. increase of the inlet pressure
- 4. reduction of the inlet pressure

An Increase of the request of gas causes a reduction of the downstream pressure in the chamber C1.

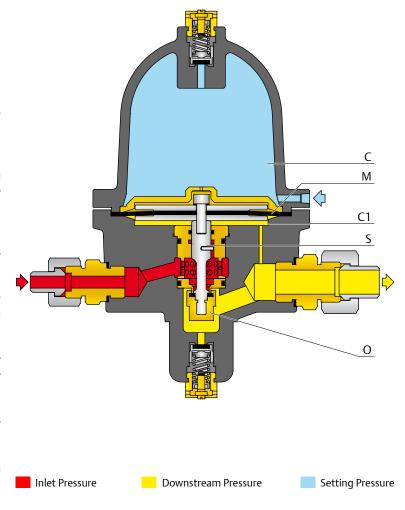

The difference of pressure which is thus formed between the chambers C and C1 operating on the diaphragm unit M causes the opening of the shutter O until the balance of the setting and downstream pressure is obtained again.

In the case 2 a reduction of the request of gas causes an increase of the downstream pressure.

The downstream pressure prevailing on the setting pressure causes a rising of the diaphragm unit M and therefore of the shutter O.

The reduction of useful section for the passage which is the con sequence of this, reduces the downstream pressure to its initial value.

The cases 3 and 4 are similar to the previous ones because, to the effects of the operation, an Increase or a reduction of the absorption correspond respectively to a reduction or to an increase of the inlet pressure.

Features

Technical Features

Body allowable pressure PS : 220 bar Inlet pressure range bpu : 1 to 220 bar

Outlet Set Pressure Ranges Wd : 0,5 to 30 mbar

Functional Features

Accuracy class AC : up to ±5% Lock-up pressure class SG : up to 10% Class of lock-up pressure zone Sz : up to 10%

Orifice

3/4"

Connections

3/4" x 1" BSP

Provided with butt weld ends:

Inlet Ø 17,2 mm - Outlet Ø 26,5 mm

Temperature

Working -10° to 60 °C

Materials

Body Steel Covers Steel

Seat Stainless Steel

Diaphragm Fabric Nitrile (NBR) Rubber + PVC

Pad Nitrile NBR or

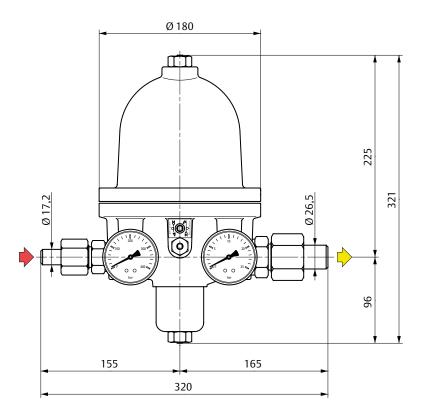

Fluorocarbon FKM
